

## STIC Search Report Biotech-Chem Library

#### STIC Database Tracking Number: 117384

TO: Manjunath N Rao

Location: REM/3B81/3C70

**Art Unit: 1652** 

Monday, March 29, 2004

Case Serial Number: 09/847392

From: Edward Hart

**Location: Biotech-Chem Library** 

**REM-1A55** 

Phone: 571-272-2512

edward.hart@uspto.gov

#### Search Notes

Examiner Rao,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

**Edward Hart** 

#### STIC-Biotech/ChemLib

From:

Rao, Manjunath N.

Sent:

Monday, March 22, 2004 10:57 AM

To: Subject: STIC-Biotech/ChemLib Sequence search request for 09/847,392

From: Manjunath N. Rao

Art Unit 1652, Room 3B81 Mail Box in Room 3C70

Phone: 272-0939

Date: 3-22-04

Please search the following as soon as possible for application with serial number

## 09/847,392

- SEQ ID NO: 1 and nucleotides 557-1171 of SEQ ID NO:1 against all commercial nucleic 1. acid databases, issued patents/published applications database and pending application database. Please provide a print of all results
- SEQ ID NO: 2, against all commercial amino acid databases, issued patents/published 2. applications database and pending application database. Please provide a print of all results.

If you have any questions please call me at the above phone number.

**Thanks** 

Manjunath N. Rao Art Unit 1652, Room 3B81, Mail Box in Room 3C70, Remsen Building, USPTO

Other (specify):

Lending Nucleic Acid and Pending Amino Acid database searches generate two sets or results each of the Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches. Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnpn Searches run against the Amino Acid Pending database produce two sets of results, with the extensions .rapm and .rapn Because they contain data that is confidential, the results of Pending database searches should not be left in the case .

On May 29, 1995 this sequence version replaced gi:148169. This sequence was determined as part of the E. coli Genome Project (Frederick E. Blattner, director) at the University of Wisconsin-Madison. The entire sequence was independently determined from E. coli MG1665. Overlaps and conflicts with other sequence determinations are annotated. Reference [1] describes the original sequence determination of all 4008 by sequence. References [2], [3], and [4] describe subsequent corrections and/or updates to that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /protein_id="AAA67566.1"

determined from E. coli K12 strain MG1655. Predicted open reading frames were determined using GeneMark software, Kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 3032 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annocated with CG Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (GGSC) database at Yale University, Kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu]. Annocation of the genome requence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web site. Coli K12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates; updated gene identifications and promoters, protein binding sites, and repeated R11ey; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' sassigned to each gene (protein or RNA-encoding) are now designated as gene synonyms instead of a gene and products; This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /translation="MRTLQGMLLPVPMLPMAVYAQBATVKEVHDAPAVRGSIIANMLQ
